Caleb Stacy

Senior Content Designer · Résumé

I'm a designer and a word nerd. I specialize in conversational AI, and in helping agents stick to the voice and tone targets a team sets. I design an assistant's persona and how it talks with people, then build the standards and measures that keep it clear, trustworthy and on brand. My other specialties are trust and safety, experimentation and helping people get together. I taught college writing and poetry first, and I'm a teacher at heart.

Based in	Richmond, Virginia
Work	Writing, content design, and language systems
Organizations	8x8 · Digbi Health · Meta
Education	MFA, Poetry VCU, 2018 BA, English WVU, 2014
Work at Meta	Verso Portals Meta Horizon NUX Work samples

Experience

Meta Nov 2022 to May 2026
Senior Content Designer, AI Lead

Verso

- Initiated and built Verso, a conversational AI agent that grew from one product area to teams across Meta in about six months. Designed its persona and interaction principles: it asked what a product actually did before suggesting wording, then worked through options with content designers and gave engineers a strong recommendation that still required content approval.
- Built the engine behind it as an MCP server in Python, so Verso could test its own draft against a team's standards and revise it before anyone saw it. That self-check made it follow rules more consistently than any other design agent at Meta.
- Defined each product's voice and tone as a measured fingerprint, built from the words that product had already shipped, starting with Meta Horizon, then Instagram, WhatsApp, Facebook and Meta Quest. With the fingerprint, Verso followed a product's rules much more accurately than an agent working from a prompt file alone.
- Consolidated scattered content standards into one structured index and turned every rule with a yes or no answer into a check. When someone challenged a standard, Verso drafted the change for the lead content designer who owned it, a review that ironed out inconsistencies over time.

Meta Horizon product content in VR and on mobile

- Led content design on social coordination initiatives, helping people get together across VR and mobile. Redesigned the Meta Horizon portal, the doorway between worlds, so people knew where they were going and who was there before they stepped through. It debuted at Connect 2024, and the portal experiment increased monthly and weekly active users about 7 to 8%. Developed just-in-time education principles for first-run VR with the onboarding team, and the new experience increased first-world visits about 13%.
- Led content design on trust and safety initiatives as Horizon Worlds became Meta Horizon, from moderator screens to recording disclosures. Worked with legal and localization partners to replace six separate notice sequences with one coordinated approach.
- Led experimentation for content designers across Meta Horizon and Meta Quest, building the practice for 35+ designers with workshops, templates and shared trackers. Their results were featured in both company-wide experiment roundups that year.

Digbi Health Oct 2021 to Oct 2022
Lead UX Writer

- Led product content at a precision-health startup, from sign-up flows and intake forms to voice and tone guidelines and the genetic reports members received.
- Moderated discussions among microbiome scientists and biostatisticians until they agreed on phrasing that was both scientifically accurate and clear to members.

8x8 Apr 2020 to Oct 2021
UX Writer

- As the company's only UX writer, wrote the tutorial and notifications for 8x8 Frontdesk, the receptionist console launched in 2021, plus the first-run tutorial for 8x8 Work for Desktop and setting descriptions in the admin console.
- Drafted voice and tone guidelines for the design system, rewrote the desktop and mobile release notes in a conversational voice, and wrote the phrases people would say to trigger actions through Siri.

WVU, VCU and Army Logistics University
Taught composition and poetry workshops, and writing classes for Army officers

Independent work

- Word Math is a research prototype that measures features of reference writing and checks drafts against targets set from them.
- Slop No More checks configured patterns in English prose and reports findings that a writer can inspect and edit.
