

Senior content designer who builds language systems: measurable voice standards, terminology schemas, and the checks that hold both writers and AI agents to a target instead of an adjective. I work upstream of interface copy, stay with the work through launch, and turn the decisions worth repeating into systems people and agents can use.

Experience

November 2022 - May 2026

Meta

Content designer → Senior content designer

- Created Meta's content-standards infrastructure. Built Verso, the company's first domain-specific AI CD, and the platform to power it: a deterministic lint toolkit, an eleven-dimension measurement engine with per-product voice baselines computed from shipped strings, and a structured index of terminology rules, review blockers, and measurement profiles covering product surfaces including Instagram, Facebook, Messenger, WhatsApp, Quest, and Horizon.
- Led travel terminology across Meta Horizon OS — one vocabulary for calling, sessions, and travel across VR, mobile, and desktop surfaces — and the naming audit for the Meta Quest to Horizon OS re-brand.
- Established Meta Horizon's first content experimentation practice and led content designers across its major product areas, representing the org. Built the workshops and the working tools for writing hypotheses and tracking tests.
- Brought content designers into agentic workflows through workshops and office hours. Taught local agent setup in VS Code, then helped designers author their own reusable skill files and deterministic scripts for the rules prose guidance could never reliably enforce.
- Helped turn the Meta Horizon phone app from a headset utility into a repeat-use mobile product. I led content from the early journeys and a strategy one-pager written for Zuck through the launch experiments; the feed experiment lifted 28-day retention by about 15%, and the quests homepage grew daily actives by nearly 5% in its first test.
- Defined the strategy and jobs to be done for Horizon portals, including the metadata and progressive-disclosure framework for moving between virtual worlds. Earned VP alignment and appeared in the Meta Connect 2024 keynote.
- Replaced billboard-style instruction with just-in-time spatial education: controllers and spatial cues teaching one thing at the moment it became relevant. Improved first-world visits, onboarding completion, and retention. The strategy and components were adopted by the Meta Quest onboarding team.

October 2021 - October 2022

Digbi Health

Lead UX writer

- Led product content for a precision-health startup, turning microbiome science and clinical data into personalized journeys from onboarding through behavior change.

April - October 2021

8x8

UX writer

- Made enterprise voice, video, chat, and contact-center tools understandable, including the phone administration the business owners setting it up had to get through.

2014 - 2021

WVU, VCU, and Army Logistics University

Professor

- Seven years teaching writing and communication — the through-line to how I treat language as a system.

Public work

- Word Math.** An open engine that decomposes writing into twelve computable dimensions, turns a target profile into generation constraints, then validates the result; ships a skill that teaches any coding agent to lint its own prose. github.com/calebstacy/word-math
- Working papers.** A running list of short public studies on measuring and governing product language. calebstacy.com/papers
- slop-no-more.** A deterministic scanner for the rhetorical moves that make prose read as machine-written: a 26-family catalog, severity tiers and repair rules.
