RÉSUMÉ · JULY 2026 · [LinkedIn](#)

Twelve years working with language under pressure: classrooms and Army briefing rooms, then games and virtual worlds at Meta scale, with detours through health and enterprise software. I look for the language decisions a system can measure or enforce, and keep the remaining judgment with people.

01 EXPERIENCE

Meta

November 2022 - May 2026

Senior content designer · Horizon, experimentation, and AI · Reality Labs and cross-org

- Created Meta's content-standards infrastructure. Built Verso, the company's first domain-specific AI CD, and the platform to power it: a deterministic lint toolkit, a ten-dimension measurement engine with per-product voice baselines computed from shipped strings, and a structured index of terminology rules, review blockers, and measurement profiles covering product surfaces including Instagram, Facebook, Messenger, WhatsApp, Quest, and Horizon.
- Led travel terminology across Meta Horizon OS - one vocabulary for calling, sessions, and travel across VR, mobile, and desktop surfaces - and the naming audit for the Meta Quest to Horizon OS re-brand.
- Established Meta Horizon's first content experimentation practice and led content designers across its major product areas, representing the org. Built the workshops and the working tools for writing hypotheses and tracking tests.
- Brought content designers into agentic workflows through workshops and office hours. Taught local agent setup in VS Code, then helped designers author their own reusable skill files and deterministic scripts for the rules prose guidance could never reliably enforce.
- Helped turn the Meta Horizon phone app from a headset utility into a repeat-use mobile product. I co-led content design, led Core Loop content, and participated in the initial design sprints. My contributions included the early mobile journeys and a strategy one-pager for leadership. The feed experiment lifted 28-day retention by about 15%, and the quests homepage grew daily actives by nearly 5% in its first test.
- Defined the strategy and jobs to be done for Horizon portals, including the metadata and progressive-disclosure framework for moving between virtual worlds. The work earned VP alignment and appeared in the Meta Connect 2024 keynote.
- Replaced billboard-style instruction with just-in-time spatial education: controllers and spatial cues teaching one thing at the moment it became relevant. Improved first-world visits, onboarding completion, and retention. The strategy and components were adopted by the Meta Quest onboarding team.

Digbi Health

October 2021 - October 2022

Lead UX writer

- Led product content for a precision-health startup, turning microbiome science and clinical data into personalized journeys from onboarding through behavior change. Genetics were included, and every journey stayed legible to a member with no clinician beside them.

8x8

April - October 2021

UX writer

- Made enterprise voice, video, chat, and contact-centre tools understandable, including the phone administration the business owners setting it up had to get through.

WVU, VCU, and Army Logistics University

2014 - 2021

Professor

- Taught composition and poetry workshops to university writers, then trained Army officers to turn complex, high-stakes information into clear, direct language. Seven years of watching what makes writing land, which is where the rest of this comes from.

02 SELECTED WORK

Every claim below is the same sentence the case study opens with.

Verso

AI content governance · Meta · 2025-2026

Voice was written in adjectives. I turned it into a target an agent could be held to.

Meta Horizon NUX

New-user education · 2025

Find the fun first. Teach in the moment.

Horizon mobile

Mobile product strategy · Meta Horizon · 2024

Giving people a reason to open Horizon on their phone.

Portals

Spatial interaction · Meta Horizon · 2024

Designing navigation when the interface is the space.

03 PUBLIC WORK

01 Word Math

An open engine that decomposes writing into twelve computable dimensions, turns a target profile into generation constraints, then validates the result; ships a skill that teaches any coding agent to lint its own prose.

github.com/calebstacy/word-math

02 Working papers

A running list of short public studies on measuring and governing product language. calebstacy.com/papers

03 slop-no-more

A deterministic scanner for the rhetorical moves that make prose read as machine-written: a 26-family catalog, severity tiers and repair rules.

04 TOOLS AND METHODS

Content design, Early product strategy, Content systems, Taxonomy design, Terminology schemas, Deterministic content checks, Experiment design, Agent and skill authoring, AI workflow design, MCP, Game and social UX, Spatial UX, Trust and safety, Workshop facilitation, Python, JavaScript, HTML and CSS, Figma, VS Code, GitHub

05 EDUCATION

Virginia Commonwealth University

MFA, Poetry - 2018

West Virginia University

BA, English - 2014
